Instructions of Model# PHTPHS-AD-RFT Photon and Phaser Board for Star Trek Enterprise 1701 & 1701-A 1:350 Scale from Polar Lights

This control system is made up of a control board and audio sound board setup to be plug and play. The only thing you need to do is connect the positive and minus power wire to a 9volt DC or 12volt DC wall power adapter (**NOT SUPPLIED**). Hot glue around the printed circuit works well for locking into place.

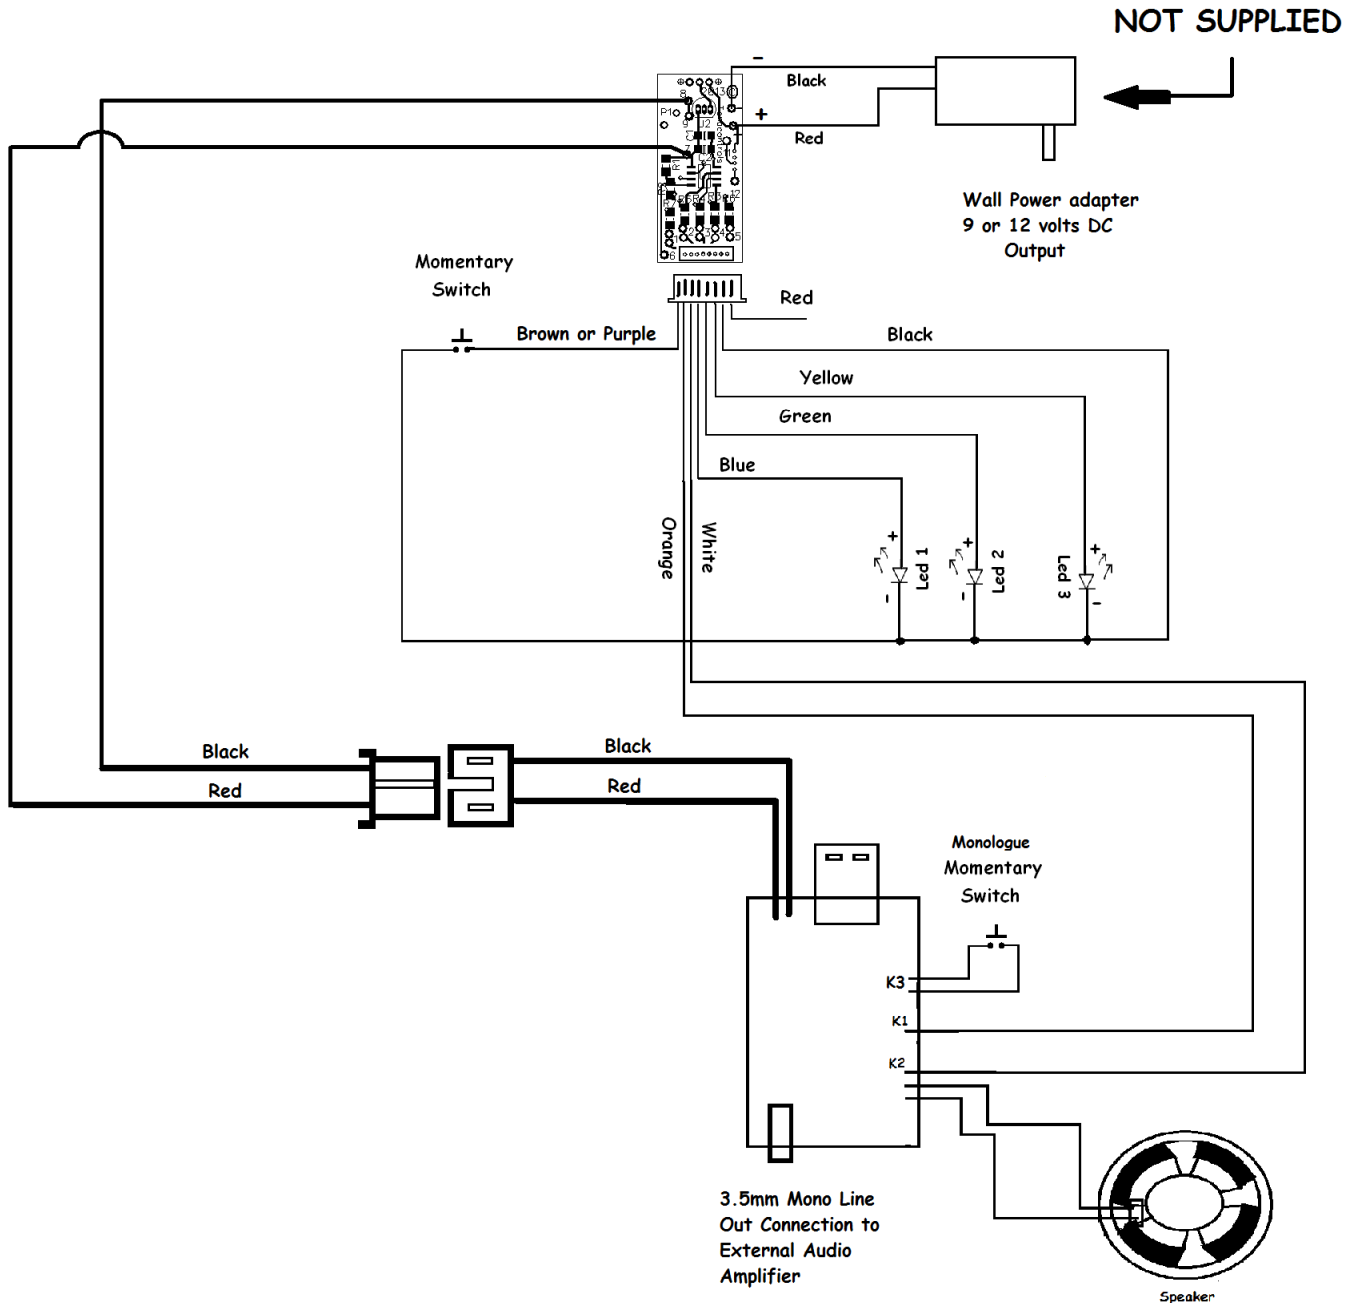

Items you will need if wires need to be extended: Soldering Iron, solder, cutter and wire stripper.

****Note:** This control board comes with a heatsink attached to the 5 volt regulator to keep it cool when the 5 minutes of dialogues are playing. Do not take it off or break the regulator that it's attached to.

How to distinguish an led:

TenaControls Brings Models to Life**Photon Torpedo**

1. **Two Red led's, LED1-LED2.** The Two Cathodes (-) of the Photon Torpedo leds, LED1-LED2 connect to Black wire on mating connector. Then connect the Anode (+) of LED1 to the Blue wire on mating connector. **See above diagram.** Then connect the Anode (+) of LED2 to the Green wire on mating connector. **See above diagram.** Pressing Momentary Switch once will activate the Photon Torpedo firing sequence.
2. **Putting the speaker in a case or tube is a must to get the proper sound requirement.**

Phaser

3. **One White led's, LED3.** The Cathode (-) of the Phaser led, LED3 connect to Black wire on mating connector. Then connect the Anode (+) of LED3 to the Yellow wire on mating connector. **See above diagram.** Pressing Momentary Switch twice will activate the Phaser firing sequence.
4. **If your system came with a Monologue Momentary Switch, you will be able to play the standard Spock and Kirk monologues.**
