

## Instructions for the Forbidden Planet C-57D Space Cruiser, 1:144 scale model Engine Simulating LED Sequencer

This unit is completely assembled and tested. Just plug in a 9 volt battery (**not included**) and swipe the magnet across the magnetic switch mounted on the saucer. The first swipe turn it on and at slow speed, second swipe is medium speed and third swipe is fast speed. If you want to turn the unit off and you are at the fast speed, just swipe the magnet across the magnetic switch and the unit will go off. We Have been asked to come up with a device that can simulate the rotating engine of the C-57D Space Cruiser. This will fit into the engine base and give that illusion, the only thing you have to do is paint the panels for a nice diffused effect. Hot glue under the printed circuit works well for locking it in place.

In case you accidentally break one of the wires, the below picture will show you which wire connects to a particular component.

Included in Kit:

- One completely assembled board
- One nine volt battery clip attached to board
- One magnetic reed switch attached to board
- One loose magnet to change speed settings
